19. Design a C program to implement process synchronization using mutex locks.

Aim:

The aim of this C program is to demonstrate process synchronization using mutex locks, ensuring that multiple processes do not interfere with each other when accessing shared resources.

Algorithm:

1. Create a mutex lock.
2. Initialize shared resources.
3. Define the critical section.
4. Use `pthread_mutex_lock()` to lock the mutex before accessing the shared resource.
5. Use `pthread_mutex_unlock()` to unlock the mutex after accessing the shared resource.
6. Perform synchronization to avoid race conditions.

Procedure:

1. Create multiple threads (representing processes).
2. Each thread will access a shared resource (e.g., incrementing a counter).
3. Mutex locks will ensure only one thread modifies the resource at a time.

Code:

```
#include <stdio.h>
```

```
#include <pthread.h>
```

```
pthread_mutex_t mutex;
```

```
int shared_resource = 0;
```

```
void* increment(void* arg) {
```

```
    pthread_mutex_lock(&mutex);
```

```
    shared_resource++;
```

```
    printf("Shared resource: %d\n", shared_resource);

    pthread_mutex_unlock(&mutex);

    return NULL;
}

int main() {

    pthread_t threads[5];

    pthread_mutex_init(&mutex, NULL);

    for (int i = 0; i < 5; i++) {

        pthread_create(&threads[i], NULL, increment, NULL);

    }

    for (int i = 0; i < 5; i++) {

        pthread_join(threads[i], NULL);

    }

    pthread_mutex_destroy(&mutex);

    return 0;

}
```

Result:

The program creates five threads, each incrementing the shared resource. The mutex ensures that only one thread can modify the resource at a time, avoiding race conditions and ensuring that the final value of `shared_resource` is 5.

Output:

The screenshot shows a code editor window with a toolbar at the top containing icons for file operations and buttons for 'Run', 'Debug', 'Stop', 'Share', and a help icon. Below the toolbar, two tabs are visible: 'main.c' (active) and 'employees.dat'. The main editing area has a dark background and displays the following text in a monospaced font:

```
Shared resource: 1
Shared resource: 2
Shared resource: 3
Shared resource: 4
Shared resource: 5

...Program finished with exit code 0
Press ENTER to exit console.
```
