Name: P.MAL REDDY

Reg-No: 192372015

27. Develop a C program for simulating the function of ls UNIX Command.

Aim:

The aim of this C program is to simulate the functionality of the 1s command in UNIX. The program lists the files and directories in the current directory or specified directory.

Algorithm:

- 1. Take an optional directory path as input. If no directory is specified, use the current directory.
- 2. Use the opendir function to open the directory.
- 3. Use the readdir function to read each entry in the directory.
- 4. Print the names of the files and directories.
- 5. Close the directory using closedir.

Procedure:

- 1. Include necessary headers (stdio.h, dirent.h, stdlib.h).
- 2. Open the directory using opendir.
- 3. Read the directory entries using readdir.
- 4. Print the filenames of the directory entries.
- 5. Close the directory after reading.

Code:

```
#include <stdio.h>
#include <stdlib.h>
#include <dirent.h>
int main(int argc, char *argv[]) {
    DIR *dir;
    struct dirent *entry;
    char *path = (argc > 1) ? argv[1] : ".";
```

```
dir = opendir(path);
if (dir == NULL) {
    perror("opendir");
    return 1;
}
while ((entry = readdir(dir)) != NULL) {
    printf("%s\n", entry->d_name);
}
closedir(dir);
return 0;
}
```

Result:

Running the program would output a list of filenames and directories in the current directory or specified directory.

Output:

```
...
main.c
testfile.txt
file.txt
a.out

...Program finished with exit code 0
Press ENTER to exit console.
```
